

**Benefits and Damage Statement for the Redetermination of Benefits
Benton County CD 3**

In accordance with Minnesota Statute (MS) 103E.351, we the viewers, submit the following Viewers' Report:

The fundamental principle for the determination of benefits and damages is based upon a comparison of the conditions prior to the construction of the ditch system with the conditions that exist after the implementation of the ditch system or proposed drainage project.

The undersigned viewers, pursuant to the order of the Benton County Drainage Authority, did meet prior to commencing duties on July 7th, 2020. Having taken the oath as required by MS 103E.305, did view, all lands affected by said proposed drainage system and further, we did determine the damages to lands affected by establishment of a grass strip, permanent and temporary damages.

We were able to determine the boundaries of the benefited area by processing and analyzing maps using "Light Detection and Ranging" (LiDAR) along with visually viewing the project area. Meetings were held with landowners, and Benton County staff. We viewed County Assessors' records to determine the number of acres of land in each parcel of each 40-acre tract of land. Other sources of information used were USDA-Natural Resources Conservation Service Web Soil Survey, 12 years of USDA satellite imagery, US Fish and Wildlife Service National Wetland Inventory (NWI) maps, and Benton County Assessors' sales data and annual report.

We have determined the extent and basis of benefits and damages as prescribed under MS 103E.315 and MS 103E.321. We have indicated in tabular form, for each lot, 40-acre tract, and fraction of a lot or tract under separate ownership that is benefited or damaged (see Exhibit A).

An easement, in the form of an additional restriction on the use of real property adjacent to the open channel of the drainage system, will be acquired and, therefore, damages will be awarded for the establishment of a permanent strip of perennial vegetation approved by the drainage authority that will not impede future maintenance of the drainage system as required in MS 103E.021. We determined these damages at two separate values. Grass Strip damages "A" acres, lands which current land use will not change, but will still have permanent restrictions of future land use at \$2,277.00 per acre. Grass Strip damages "Wetland acres", lands which value is indeterminable and for reasons of documentation are set at \$1 per acre.

Right of way damages, having been determined and paid in the original proceedings for establishment of the drainage system, based on the area contemplated and included in the proceeding for the establishment or subsequent improvement of the drainage system, were not considered.

Benefits

**Please refer to attached "Technical Memorandum" provided by Houston Engineering Inc. **

We have determined the following benefits on and related to the redetermination of benefits for Benton County CD 3. Benefits were determined based on the drainage system operating in its as constructed condition.

Using the provided Technical Memorandum as a guide of where the hydrologic burden and demand on the system comes from the Viewers have determined the economic value of the drainage area of County Ditch 3 to be the estimated cost of construction of the public system. The Viewers have allocated benefits based on the total parcel benefits to be estimated cost of construction of CD 3 and each parcels percent of runoff contribution according to the Technical Memorandum, to be a directly related to the total parcel value. Meaning if the total estimated cost of construction of County Ditch 3 is \$100 and a single parcel had a runoff contribution of 1% it would have total parcel benefits of \$1.

We have verified that the estimated cost of constructing the public drainage system is valid and equitable by verifying alternate means of directing runoff such as changing, or rerouting runoff or stormwater of all parcels within the drainage area to a different outlet, would far exceed the estimated cost of construction of the existing public system.

Non-benefiting Acres

Based on current land use and regulatory restrictions, permanent program restrictions (i.e., RIM or CREP) or other permanent restriction and restoration to pre-settlement landscape conditions or creation of wetland areas, we determined some areas to be non-benefited from the drainage system and restricted from taking future benefit from the drainage system. For example, we determined that lands restored to pre-settlement conditions and permanently restricted from future modification would not drain in any altered manner such that the drainage system would be burdened by the land other than such burden as nature would have provided. Further, for example, nonconverted wetlands that are so restricted from conversion by regulation that conversion is unlikely, were not determined to benefit from the system.

State Lands or Water Area Used for Conservation

The Viewers have evaluated these lands in accordance with, MN § 103E.025 subdivision 3. "In determining benefits to the state land or water area in any proceeding to levy assessments or offset benefits against damages, proper consideration must be given to the value of the area for the purpose it is held or used by the state, with other material elements of value."

At the completion of our examination, we did sum up the total benefits for Benton CD 3. We found that the total benefits are \$295,240. Damages for CD 3 are \$1,346.01. (See Exhibit A for tabular report of benefits.)

We recommend that the Benton County Drainage Authority hold a final hearing on the report and confirm the benefits and damages for Benton CD 3.

Dated this January 14th, 2022.

Subject: Benton CD 3 Hydrologic Analysis Summary to Support Redetermination of Benefits

Date: September 15, 2021

Project: 6183-0007

INTRODUCTION

Benton County Ditch 3 (CD 3) is undergoing a redetermination of benefits proceeding under M.S. 103E. Hydrologic analysis of the CD 3 drainage area was completed to help the appointed viewers (H2Over Viewers) further consider the benefits received from portions of the watershed. Specifically, the runoff volume produced during precipitation events for every parcel and Right of Way (RoW) area within the CD 3 drainage area was estimated. Runoff volume estimations were calculated using the SCS Curve Number¹ (CN) method, which relies on the hydrologic soil group type and land use data. The proportional runoff volume produced by each parcel and RoW area compared to the total watershed runoff volume estimate was then calculated. The analyzed area is shown in **Figure 1**.

EXCESS RAINFALL ANALYSIS

Land Use and Determination of Impervious Surface Areas

A land use type was assigned to each parcel based on the city of Sauk Rapids zoning map. Parcels not covered by the city of Sauk Rapids zoning map were assigned a land use type based on review of recent aerial imagery. **Figure 2** displays the land use type for each parcel. The CD 3 watershed area is primarily commercial and various types of residential lots (e.g. single family, multi-family buildings). The amount of impervious area (e.g., pavement, building roofs) for each parcel was estimated based on the parcel size and land use type. **Table 1**, below, displays the land use types and their description, along with associated impervious area percentages.

¹ United State Department of Agriculture, Natural Resources Conservation Service (USDA NRCS, 1986). Urban Hydrology for Small Watersheds, Technical Release 55 (TR-55).

Table 1. Land Use Types and Impervious Areas

Land Use Type	Description	Impervious Area
A1	Crop land and golf courses	0%
C1	Offices/Office Complex (professional use)	65%
C2	Offices and other commercial	90%
CHURCH	Church	35%
PARK	Park	0%
R1	Single Family House	*See Table 2
R2	Two Family House	65%
R3	Multiple Family Residence	65%
R4	Elderly multifamily units	65%
RoW	Right of Way	**See Table 3

Parcels within land use type R1 (Single Family building Residential) and RoW were further subdivided into groups for more accurate estimates of impervious area. **Tables 2 and 3**, below, display the impervious area estimates for R1 and RoW parcels. **Figure 3** displays the impervious area percentage for each parcel in the CD 3 watershed.

Table 2. Impervious Percentages for Single Family House (R1) Parcels

Lot Size (acres)	Impervious Percentage
0 - 0.33	50%
0.33 - 0.5	30%
0.5 - 1	20%
1 - 2	10%
2 - 5	7.50%
5 -10**	14%
10+	5%

**Impervious area for this range is based on a single parcel

Table 3. Impervious Percentages for RoW Parcels

Authority Category	Impervious Percentage
US Highway	35%
County	60%
Municipal	90%

Soil Type

SSURGO² soil data was obtained from the Web Soil Survey and used to assign a majority soil type to each parcel within the drainage area. Hydrologic soil groups were assigned based on “drained” conditions.

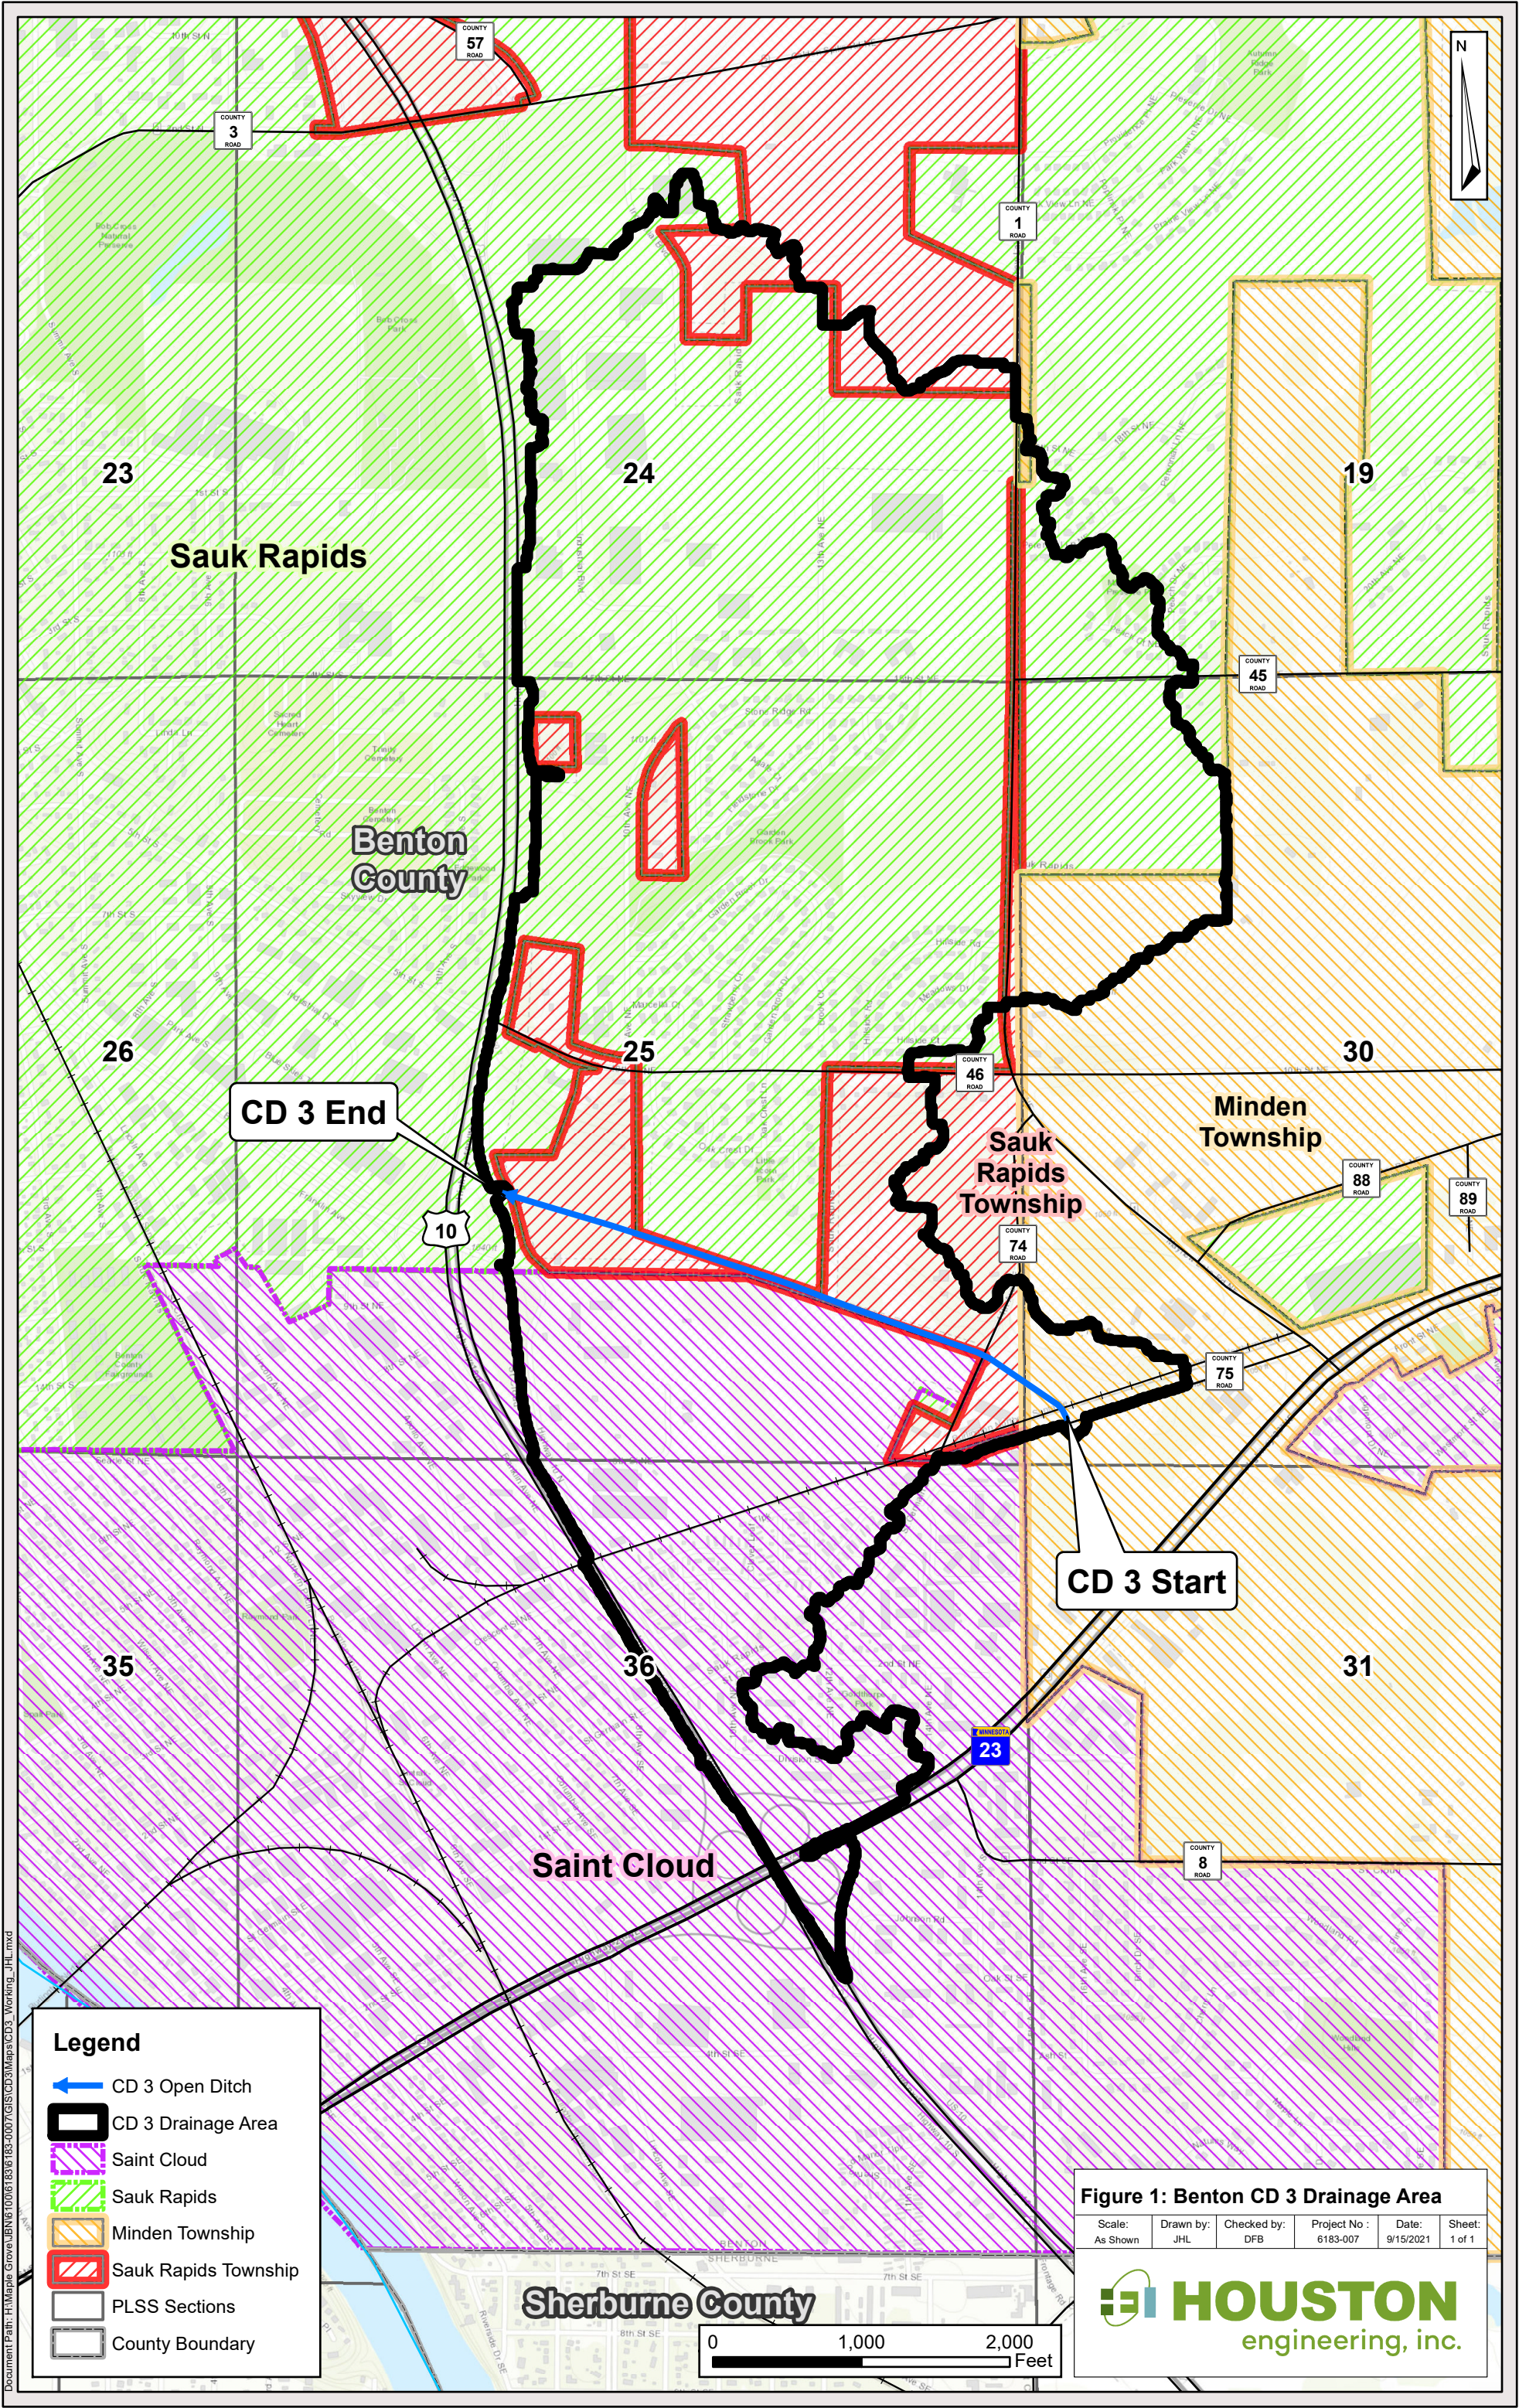

Runoff Analysis

Once the soil type, land use, and impervious area percentage was determined for each parcel, composite CN values were tabulated. Runoff volumes were calculated based on these CN values for the 2, 5, and 10-year storm events which had rainfall amounts of 2.67, 3.33, and 3.92 inches, respectively. Each parcel's runoff volume was summed to calculate the total runoff volume. Finally, the relative portion of runoff volume generated for each parcel was calculated. It should be noted that parcels with less than 0.01 acres of are within the CD 3 watershed were excluded. **Table 4** displays the runoff volume generated for each parcel and its relative portion of total runoff within the system.

CONCLUSION

This analysis estimated the proportional runoff contribution of every parcel within the CD 3 watershed. A composite CN was computed for each parcel and used to predict the amount of runoff volume produced by each one. Results are presented in this summary and will be considered by H2Over Viewers during the development of their Viewer's Report for the Redetermination of Benefits on CD 3.
